                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                560
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          620
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel G-protein coupled receptor polypeptides referred as GCREC peptides, useful for treating multiple sclerosis, cholecystitis heart failure, angina pectoris, rheumatoid arthritis, obesity, osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to human G-protein coupled receptor (GCREC 1-16) polypeptides and polynucleotides. Sequences of the invention are useful cor the diagnosis, treatment and prevention of cell proliferative (e.g. cancer, cirrhosis), neurological (e.g. multiple sclerosis, Huntington's disease, Alzheimer's disease), cardiovascular (e.g. angina pectoris, near failure), gastrointestinal (e.g. multiple sclerosis, cholecystitis), autoimmune/inflammatory (rheumatoid arthritis, Hashimoto's thyroiditis) and metabolic disorders (e.g. obesity, osteoporosis), viral infections, atherosclerosis and hepatitis, GCREC proteins are useful for identifying compounds that modulate, mimic and block olfactory and taste sensations. They are also useful for identifying GCREC modulators. GCREC DNAs are useful in gene therapy. The present sequence is human GCREC-6 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9

                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                     ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated polypeptide, which is a G-protein coupled coupled receptor (GPCR) related to Subfamily I of G-protein coupled receptor (GPCR) related to Subfamily I of G-protein coupled receptor type proteins (GPCRs), designated the 93870 receptor. The polypeptides, nucleic acid molecules and antibodies of the invention are useful in screening clinical trials or pharmacognetics), or in methods of creatment (e.g. therapeutic and prophylactic). They are useful in treatment (e.g. therapeutic and prophylactic). They are useful in treatment (e.g. therapeutic and prophylactic). They are useful in treatment (e.g. therapeutic and prophylactic). They are useful in treatment (e.g. therapeutic and prophylactic). They are useful in treatment (e.g. therapeutic and prophylactic). They are useful in treatment of the 93870 polypeptides or nucleic acids, e.g. immune and influence of disorders, skeletal or bone metabolism disorders, or bone marrow monounclear disorders, as well as cellular consideration and/or differentiative disorders, viral diseases, liver disorders, and pain and metabolic disorders, viral diseases, liver disorders, and pain and metabolic disorders. Conditions that can be retained include cancer, disbectes mellitues, hypothyroidism, reproductive or fertility disorders, HzV, bacterial or viral meningitis, fungal meningoencephalitis, multiple sclerosis, convincinimatory bowel disease, heart failure, angina pectoris, myocardial infarction, rheumatoid arthritis, dermatitis, graft-versus-host cinflammatory bowel disease, heart failure, angina pectoris, graft-versus-host cinflamming are useful for studying the function and/or activity of the human d-protein coupled receptor type protein of the invention of the invention of the human d-protein coupled receptor typ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180

New G-protein coupled receptor used in receptor assays as a target for diagnosis and treatment of receptor-mediated disorders, e.g. immune and inflammatory disorders, platelet disorders, skeletal or bone metabolism

Claim 5; Page 99-100; 105pp; English

The invention relates to an isolated polypeptide, which is a G-protein coupled receptor (GPCR) related to Subfamily I of G-protein coupled receptor (GPCR) related to Subfamily I of G-protein coupled receptor type proteins (GPCRs), designated the 93870 receptor. The polypeptides, nucleic acid molecules and antibodies of the invention are nother of the 93870 polypeptides or prediction (e.g. diagnostic assays, treatment (e.g. therapeutic and prophyladis), or in methods of treatment (e.g. therapeutic and prophyladis). They are useful in treatment (e.g. therapeutic and prophyladis or nucleic acids, e.g. immune and inflammatory disorders, platelet disorders, skeletal or bone metabolism disorders, or bone marrow mononuclear disorders, as well as cellular proliferative and/or differantiative disorders, viral as cellular and pain and metabolic disorders, viral diseases, liver disorders, and pain and metabolic disorders. Conditions that can be treated include cancer, diabetes mellitus, hypothyroidism, changed partial meningencephalitis, multiple sclerosis, hypothyroidism, reproductive or fertility disorders, HIV, bacterial or viral meningitis, fungal meningencephalitis, multiple sclerosis, Hutlangton's disease, astala-telangiectersia, the function, rheumatoid arthritis, dermatitis, garaft-versus-host inflammatory bowel disease, asthma, conjunctivitis, garaft-versus-host changease, allersy, idiopathic thrombocytopenia, or osteoporosis. The transgenic animals are useful for studying the function and/or activity of 93870 activities. The polymucleotide sequence represents the cDNA of the invention can be used in the study.

                                                          The invention relates to a G protein-coupled receptor (GPCR) IGS70

CC polypeptide including sequences that are 99-90.6% identical Also

CC included are the polymuclectide encoding IGS70 (including sequences 98-
99.6% identical to the polymuclectide or the DNA insert contained in
plasmid CBS 109818), a hybridisation probe derived from the

CC polymuclectide, a DNA or RNA expression system producing IGS70, a host

CC comprising the expression system, IGS70 receptor membrane preparation

derived from the cell, an antibody immunospecific for IGS70, IGS70 is

CC useful for diagnosing a disease or a susceptibility to disease in a

CC subject related to expression or activity of the IGS70 polypeptide in a

CC subject by determining the presence or absence of mutation in the

CC subject by determining the presence or absence of mutation in the

CC subject by determining the presence or absence of mutation in the

CC subject by determining the presence or absence of mutation in the

CC subject by determining the presence or absence of mutation in the

CC subject by determining the presence or absence of mutation in the

CC subject by determining the presence or absence of mutation in the

CC subject by determining the presence or absence of mutation in the

CC subject by determining the presence or absence of mutation in the

CC subject by determining the presence or absence of mutation in the

CC antigonist The IGS70 protein, polynucleotide, antibody and identified

CC antigonists are useful for treating psychiataric and central nervous

CC failure, angina pectoris, myocardial infarction, kidney disease such as

CC failure, angina pectoris, myocardial infarction, kidney disease such as

CC failure, angina pectoris, myocardial disease, ulcers such as gastric ulcer,

CC inflammation, cancers, asthma, infection (such as bacterial, viral,

CHMO, diabetes, osteoporosis and allergies. The present sequence encodes

CC fundal protozoal) especially human immunodeficiency virus infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              540
                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a novel polynucleotide encoding a guanosine triphosphate-binding protein coupled receptor (GPR). A polynucleotide of the invention may have a use in gene therapy. The polynucleotide and polypeptide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor. The polynucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention discloses an isolated human polypeptide, and encoding nucleic acid, for a G protein-coupled receptor (GPCR), particularly the nucleic acid, for a G protein-coupled receptor (GPCR), particularly the communication between cells and their environment and are characterised by a serpentine structure that passes through the cell membrane seven times, hence the reason such receptors are sometimes called seven transmembrane receptors (7TM). The polynucleotides and polypeptides are useful for identifying an nothody that binds to an epitope of the polypeptide, for isolating an antibody that binds to an epitope of the polypeptide, for isolating an antibody that binds to be opypeptide or compound that binds the polypeptide or polynucleotide and/or modulates its biological activity, for screening a must polynucleotide and/or modulates its biological activity, for screening of thuman subject to diagnose a disorder, or a genetic predisposition to a compound that binds the polypeptide or identifying compounds useful for the treatment of a mental disorder, for identifying compounds useful as a modulator of binding between copperate in a mammal. The nucleic acid or negren inducing an immune response in a mammal. The nucleic acid or polypeptide is particularly useful, using gene therapy, for treating e.g. anxiety disorders, depression, bipolar disorder, schizophrenia, configuration of disease, dyskinesias, manic depression, stroke, Parkinson's disease, dyskinesias, manic depression, stroke, parkinson's disease or Alzheimer's disease. The nucleic acid and polypeptide may also be used for treating diabeters, inflammation or wounds. The sequences presented in ABS/0202-ABS/0248, ABS/0338 and ABS/0243 are the DNAs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  146
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9

```

```
The present invention relates to novel G protein-coupled receptors (GDCRX; where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27, 28, 21-38, 40, 41, 53-60) and their coding sequences. The present sequence is the coding sequence for one such G protein-coupled receptor. GPCRs are also known as seven transmembrane receptors and function in signal transduction. The nGPCRx coding sequences are useful for screening a human to diagnose a disorder affecting the brain or a genetic form of predisposition, specifically schizophrenia. nGPCRx are useful for captures or identifying compounds useful for treating schizophrenia. Detection of nGPCRx in a sample is useful as a diagnostic tool for diseases or nGPCRx in a sample is useful as a diagnostic tool for diseases or nGPCRx in a sample is useful as a diagnostic tool for diseases or nGPCRx in a sample is useful as and hormonal disorders. Modulators of disease, proliferative disorders, renal failure, rheumatoid arbritis, including schizophrenia, AphDADD (attention deficit disorders such as Alzheimer's disease, pricible formation deficit disorders, and neuronal disorders such as Alzheimer's disease, prakinson's disease, migraine and senile dementia. Additional disorders include inflammatory conditions (e.g. Crohn's disease), rheumatoid arbritis, autolmmune disorders, cancers, concers, concers, concers.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes novel polypeptides which have anti-HIV, antiatteriosclerotic, cytostatic, neuroprotective, antiparkinsonian, hepatotropic, laxative, cerebroprotective, antiinflammatory, virucide, antibacterial, fungicide and protozoacide activity. The products of the invention are useful for treating a disease or condition associated with decreased expression or over expression of functional G-protein coupled receptors (GCREC), while antibodies generated against the polypeptide of with the expression of GCREC e.g. arteriosclerosis, cirrhosis, cancer, stroke, Alahaimer's disease, Parkinson's disease, Crohn's disease, constipation, ALDS, or bacterial, viral, fungal or protozoal infections. The compounds described in the invention can be used for gene therapy. AAF88580-AAF8851 encode the GCREC proteins represented by AAB71322-AAB71359, described in the disclosure of the invention

The products of the invention are useful for treating a disease or condition associated with decreased expression or over expression of functional G-protein coupled receptors (GCREC), while antibodies generated against the polypeptide of the invention are useful for diagnosing a condition or disease associated with the expression of GCREC e.g. arteriosclerosis, cirrhosis, cancer, etroke, Alzheimer's disease, Parkinson's disease, constipation, ALDS, or bacterial, viral, fungal or protozcal infections. The compounds described in the invention can be used for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Baughn MR, Tribouley CM, Nguyen DB, Thornton M, Yao MG; Kallick DA, Gandhi AR, Walla NK, Arvizu C, Elliott VS, Hafalia AJA; Rankumar J, Pei J, Tang YT, Yue H, Reddy R, Butford N, Lu DAM; Graul RC, Khan FA, Walsh RT, Ison CH, Richardson TW, Griffin JA; Warren BA, Yang J, Lee EA, Harland L;

stroke, Alzheimer's disease, Parkinson's disease, Crohn's disease, constipation, AIDS, or bacterial, viral, fungal or protozoal infections. The compounds described in the invention can be used for gene therapy. AAR88580-AAF88627 encode the GCREC proteins represented by AAB71322-AAB71369, described in the disclosure of the invention

Sequence 1336 BP; 340 A; 289 C; 287 G; 420 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes novel polypeptides which have anti-HIV, antiarteriosclerotic, cytostatic, neuroprotective, antiparkinsonian, hepatotropic, laxative, cerebroprotective, antihflammatory, virucide, antibacterial, fungicide and protozoacide activity. The products of the invention are useful for treating a disease or condition associated with decreased expression or over expression of functional G-protein coupled receptors (GCREC), while antibodies generated against the polypeptide of the invention are useful for disgnosing a condition or disease associated with the expression of GCREC e.g. arteriosclerosis, cirrhosis, cancer,

antinflammatory, antiasthmatic, antirheumatic or antiarthritic. The GAVE18 receptor and the DNA sequence encoding it may be a target for antisense therapy or gene therapy. The nucleic acid molecule, GAVE18 proteins and antibodies may be useful in screening assays, detection assays (for example chromosomal mapping, tissue typing or forensic biology), or predictive medicine (for example diagnostic assays, prognostic assays, montoring clinical trials and pharmacogenomics. The nucleic acid molecule, GAVE18, anti-GAVE18 anti-GAVE18 anti-bodies, agonist, inverse agonist and antagonist are also useful for preventing and treating a disease or disorder associated with abearant expression or activity of GAVE18, such as inflammation and immunological-related diseases or disorders for example asthma, chronic obstructive pulmonary disease or ineumatoid arthritis. The present sequence is the DNA sequence encoding the GAVE18 protein of the invention

The invention provides new G-protein coupled receptor (GPCR) polypeptides designated TGR2, TGR38, TGR18, TGR164, TGR343 and TGR358 and encoding polynucleotides. The polypeptides can be expressed by standard DNA recombination methodology. The polypeptides are useful for screening or identifying modulators of GPCR or signal transduction. The modulators of signal transduction are useful for treating or preventing TGR-associated disorders, e.g. asthma, multiple sclerosis or kidney disease. The polypeptides are useful as tragets for diagnosing or treating e.g. epilepsy, stroke, neurodegeneration, hypogonadism, hyperprolactinemia, asymptomatic urinary abnormalities, hypertension, nephrolithiasis, cirrhosis, lesions, laundice, psoriasis, lupus erythematosus, or acute inflammatory dermatoses. The present sequence represents a human TGR343
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120

The present invention provides the protein and coding sequences of several human G-protein coupled receptors (GPCRs). These can be used in the identification of candidate compounds as receptor agonists or inverse agonists having applicability as therapeutic agents. The present sequence is a GPCR coding sequence of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     241 TGGATGTTTGGGCTGCCCTTCTGCAAATTTGTGAGTGCCATGCTGCACATCCACATGTAC 300

The present invention provides the protein and coding sequences of a novel human testis-oxiginated G protein-coupled receptor protein TGR10. The sequences can be used in the development of drugs for the treatment of diseases of the central nervous system, inflammations, diseases of the circulatory system, cancer, metabolic diseases, immunological diseases, and diseases of the gastrointestinal system. The present sequence is the coding sequence of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                        360

This sequence encodes a human G-protein coupled receptor (GPCR), PFI-021. Expressed sequence tags of the PFI-021 sequence are mainly found in cDNA libraries from peripheral blood monouclear cells. Two ESTS have been identified in libraries derived from breast mRNA. PFI-021 and the corresponding cDNA are used to treat a patient needing altered activation or expression of a GPCR, such as inflammation, allergy and respiratory, neurology, psychology, urogenital disease, reproductive and sexual dysfunction/disorders, cancer, tissue repair, dermatology, skin apgeneration disorders, photoageing, frailty, osteoprossis, metabolic disease, cardiovascular disease, gastro- intestinal disease, anti-infection, sensory organ disorders, sleep disorders and hair loss
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Buch

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```

The invention relates to an isolated polypeptide, which is a G-protein coupled receptor (GPCR) related to Subfamily I of G-protein coupled coupled receptor type proteins (GPCRs), designated the 93870 receptor. The polypeptides, nucleic acid molecules and antibodies of the invention are polypeptides, nucleic acid molecules and antibodies of the invention are monitoring clinical trials or pharmacogenetics), or in methods of treatment (e.g. therapeutic and prophylactic). They are useful in the plants of the 93870 polypeptides or nucleic acids, e.g. immune and inflammatory disorders, platelet disorders, skeletal or bone metabolism cinflammatory disorders, platelet disorders, skeletal or bone metabolism disorders, and fearname and/or differentiative disorders, normoral disorders, cardiovascular disorders, viral diseases, harmonial disorders, nucleic disorders, and pain and metabolic disorders. Conditions that can be created include cancer, diabetes mellitus, hypochyrodism, cancer, disease, mellitus, hypochyrodism, chromatodism, reproductive or fertility disorders, HIV, bacterial or viral meningitis, fungal meningoencephalitis, multiple sclerosis, conflammatory bowel disease, parkinson's disease, ataxia-telanglectasia, thurtington's disease, parkinson's disease, aschma, conjunctivitis, graft-versus-host disease, allergy, idiopathic thrombocytopenia, or osteoporosis. The transgenic animals are useful for studying the function and/or activity consense the anneal or desired sequence represents the 93870 pacterin and for identifying and/or evaluating modulatorse of a 93870 pacterin and for identifying and/or evaluating modulatorse of a 93870 pacterin and for identifying sequence represents the 93870 nucleotide sequence represents the 93870 nucleotides of the invention and or be useful for studying the protein of the invention of the invention Sequence 939 BP; 215 A; 212 C; 205 G; 307 T; 0 U; 0 Other;

The invention relates to an isolated polypeptide, which is a G-protein coupled receptor (GPCR) related to Subfamily I of G-protein coupled receptor type proteins (GPCRs), designated the 93870 receptor. The polypeptides, nucleic acid molecules and antibodies of the invention are useful in screening classes, predictive medicine (e.g. diagnostic assays, control of the 93870 polypeptides of in methods of treatment (e.g. therapeutic and prophylactic). They are useful in treatment (e.g. therapeutic and prophylactic). They are useful in treatment (e.g. therapeutic and prophylactic). They are useful in the 93870 polypeptides or nucleic acids, e.g. immune and inflammatory disorders, platelet disorders, skeletal or bone metabolism disorders, or bone marrow monounclear disorders, as well as cellular conditions and/or differentiative disorders, viral diseases, liver proliferative and pain and metabolic disorders, viral diseases, liver disorders, and pain and metabolic disorders, conditions that can be reproductive or fertility disorders, HIV, bacterial or viral meningitis, fungal meningoencephalitis, multiple sclerosis, contringents disease, parkinson's disease, asthma, conjunctivitis, graft-versus-host inflammatory bowel disease, asthma, conjunctivitis, graft-versus-host changesnic animals are useful for studying the function and/or activity condisease, allergy, idiopathic thromboytopenia, or osteoporosis. The transgenic animals are useful for studying the function and/or activity condisease, allergy, idiopathic thromboytopenia, or osteoporosis. The condisease, asthma, conjunctivity, graft-versus-host changenic animals are useful for studying the function and of or identifying and/or evaluating modulators of a 93870 protein and for identifying and/or evaluating modulators of condition and be used in continued therapy. This polynucleotide sequence represents the cDNA of the invantion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  530
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 590
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       480

cc derived from the cell, an antibody immunospecific for IGS70, IGS70 is useful for diagnosing a disease or a susceptibility to disease in a cc subject related to expression or activity of the IGS70 polypebtide in a cubject by determining the presence or absence of mutation in the concision from the subject. IGS70 is also useful identifying agonist cor antagonist. The IGS70 protein, polymucleotide, antibody and identified ant/agonists are useful for treating psychiatric and central nervous cor antagonists are useful for treating psychiatric and central nervous cor antiple sclerosis, anxiety, cardiovascular diseases such as heart cor antiple sclerosis, anxiety, cardiovascular diseases such as heart cor antiple sclerosis, anxiety, cardiovascular diseases such as heart cor and failure, againmentorined disease, ulcers such as gastric ulcer, inflammation, cancers, asthma, infection (such as bacterial, viral, fungal, proteozal) especially human immunodeficiency virus infection (HIV), diabetes, osteoporosis and allergies. The present sequence encodes the human GPCR IGS70

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a G protein-coupled receptor (GPCR) IGS70 polypeptide including sequences that are 98-99.6% identical. Also included are the polymuclectide encoding IGS70 (including sequences 98-99.6% identical to the polymuclectide or the DNA insert contained in plasmid GBS 109918), a hybridisation probe derived from the polymuclectide, a DNA or RNA expression system producing IGS70, a host comprising the expression system, IGS70 receptor membrane preparation

                                                                                      Novel G-protein coupled receptor polypeptides referred as GCREC peptides, useful for treating multiple sclerosis, cholecystitis heart failure, angina pectoris, rheumatoid arthritis, obesity, osteoporosis.
                                                                                                                                                                                                  The invention relates to human G-protein coupled receptor (GCREC 1-16) polypeptides and polynucleotides. Sequences of the invention are useful for the diagnosis, treatment and prevention of cell proliferative (e.g. cancer, cirrhosis), neurological (e.g. multiple sclerosis, Huntington's disease, Alzheimer's disease), cardiovascular (e.g. angina pectoris, heart failure), gastrointestinal (e.g. anorexia, cholecystitis), autoimmune/inflammatory (rheumatoid arthritis, Hashimoto's thyroiditis) and metabolic disorders (e.g. obesity, osteoporosis), viral infections, atherosclerosis and hepatitis. GCREC proteins are useful for identifying compounds that modulate, mimic and block olfactory and taste sensations. They are also useful for identifying GCREC modulators. GCREC DNAs are useful in gene therapy. The present sequence is human GCREC-6 CDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GTCTTCATCATTATGTTGATGGTGCAGAAGCTACGCCACTCTTTACTATCCCACCAGGAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ô
                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel polynucleotide encoding a guanosine triphosphate-binding protein coupled receptor (GPCR). A polynucleotide of the invention may have a use in gene therapy. The polynucleotide and polypeptide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor. The polynucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120

                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention discloses an isolated human polypeptide, and encoding nucleic acid, for a G protein-coupled receptor (GPCR), particularly the nucleic acid, for a G protein-coupled receptor (GPCR), particularly the communication between cells and their environment and are characterised communication between cells and their environment and are characterised by a serpentine structure that passes through the cell membrane seven times, hance the reason such receptors are sometimes called seven cransmembrane receptors (7TM). The polynucleotides and polypeptides are useful for identifying an nGPCR allelic variant that correlates with a content disorder, for isolating an antibody that binds to an epitope of the polypeptide for identifying a compound that binds to an epitope of the polypeptide and/or modulates its biological activity, for screening a copyrucleotide and/or modulates its biological activity, for screening a disorder to disprace to disprace in a genetic predisposition to the disorder. Cor identifying compounds useful for the treatment of a mental disorder and for identifying compounds useful for the treatment of a mental disorder. Go inducing an immune response in a mammal. The nucleic acid or polypeptide is particularly useful, using gene therapy, for treating e.g. anxiety disorders, depression, bipolar disorder, schizophrenia, chuntington's disease, dyskinesias, manic depression, stroke, Parkinson's disease or Alzheimer's disease, The nucleic acid and polypeptide may also be used for treating diabetes, inflammation or wounds. The sequences presented in ABS70222-ABS70248, ABS70318 and ABS70243 are the DNAs
